

GridEx is the world's first blockchain cryptocurrency exchange that supports high-frequency trading. Our infrastructure gives banks and crypto funds the opportunity to make profits on HFT transactions, which means higher liquidity and lower exchange commissions for average crypto traders and investors.

THE FUTURE OF CRYPTO TRADING

Problem

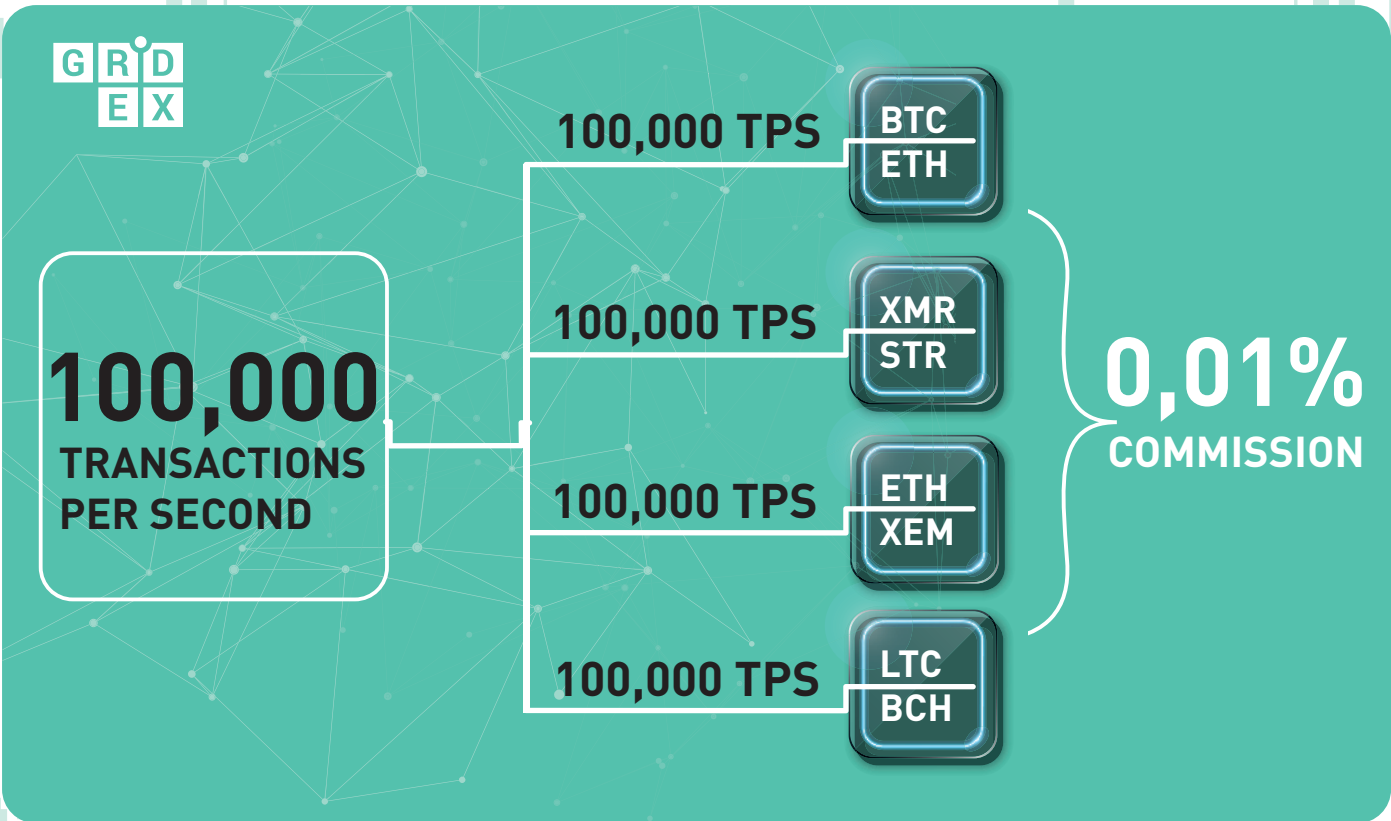

The cryptocurrency market is still small, compared to financial markets. According to CoinMarketCap, the daily volume of cryptocurrency trading in March 2018, was between \$15 to 20 billion. The daily volume of the FOREX market is almost \$3 trillion. The result of comparatively low cryptocurrency market liquidity is large exchange commissions for average users, such as traders and investors.

Solution

We are developing a blockchain cryptocurrency exchange that will allow conducting up to 100,000 transactions per second for each instrument. The GridEx solution for conducting HFT transactions will make the crypto trading business attractive for banks and funds, making them lower their exchange commissions on the market considerably.

GridEx also creates new prospects for algo-traders. We have developed a unique terminal with outstanding trading possibilities, as well as technical analysis and algorithmic trading tools.

The geo-distributed, decentralized system will allow direct access and minimum distance from bank servers to our equipment in the GridEx data-centres in one of the largest financial hubs — Zurich, home to our head office. In the future, data centres will be opened in Tokyo, Chicago, Frankfurt, London, Singapore and New York.

Financial Forecast

GridEx aims to develop a cryptocurrency exchange with a 3% market share of the total global trading volume by the end of 2018. Assuming the current daily volume of trading of \$15 to 20 billion, our target is to reach \$450-600 million dollars of turnover daily. Because of our business expansion and the opening of data-centres in world financial hubs, we are looking forward to growing our market trading volume share to 8% and \$1.4 billion, respectively.

GridEx share in cryptocurrency daily trading volume

	IN PERCENT	IN USD
2018	3 %	\$ 0,525 billion
2019	8 %	\$ 1,4 billion

* — assuming the current cryptocurrency trading volume will stay the same.

Team

Anton Ternavsky,
Co-Founder

Over 20 years of experience in programming. Chief Development Architect of the trading and analytical platform AlterTrader. Worked in TOP IT-companies as a development leader. For the last 9 years has been working in "Kaspersky Lab", including 3 years on the position of development team leader.

Evgeny Ternavsky,
Co-Founder

Over 14 years of experience as trader, innovator, inventor, crypto enthusiast. Professional with more than 11 years of experience in the international trade of raw materials.

Sergey Nebosenko,
Software Developer

For the last 10 years worked at the Russian Mission Control Center as a software developer. Worked on the International Space Station (ISS) program, and with small and medium-sized satellites.

Product Development

We have spent more than \$1 million on our product. The MVP will be ready in May, 2018.
